

December 2012

No. OCH442 REVISED EDITION-B

TECHNICAL & SERVICE MANUAL

Series PKFY Wall Mounted R410A

Indoor unit
[Model names] [Service Ref.]

PKFY-P32VHM-E PKFY-P32VHM-E

PKFY-P32VHM-ER1

PKFY-P32VHM-ER2

PKFY-P40VHM-E PKFY-P40VHM-E

PKFY-P40VHM-ER1

PKFY-P40VHM-ER2

PKFY-P50VHM-E PKFY-P50VHM-E

PKFY-P50VHM-ER1 PKFY-P50VHM-ER2

Revision:

- PKFY-P32/40/50VHM-ER2 have been added in REVISED EDITION-B.
- Some descriptions have been modified.
- Plase void OCH442 REVISED EDITION-A.

Note:

- This manual describes only service data of the indoor units.
- RoHS compliant products have <G> mark on the spec name plate.

TECHNICAL CHANGES

PKFY-P32VHM-ER1 → PKFY-P32VHM-ER2
PKFY-P40VHM-ER1 → PKFY-P40VHM-ER2
PKFY-P50VHM-ER1 → PKFY-P50VHM-ER2

1. INDOOR CONTROLLER BOARD (I.B.) has been changed. (S/W version up)

PKFY-P32VHM-E
PKFY-P40VHM-E
PKFY-P50VHM-E
PKFY-P50VHM-E
PKFY-P50VHM-ER1

- 1. INDOOR CONTROLLER BOARD (I.B.) has been changed. (S/W version up)
- 2. Fan speed has been changed. (4 speed \rightarrow 3 speed)
- 3. Heat exchanger has been changed.

PKFY-P32VHM-E PKFY-P40VHM-E PKFY-P50VHM-E

1

Service parts of room temp. thermistor (TH21) has been changed. (T7W E05 $202 \rightarrow R01 N20 202$) (The position to be attached has been changed. Band/PVC tube have been added.)

SAFETY PRECAUTION

CAUTIONS RELATED TO NEW REFRIGERANT

Cautions for units utilizing refrigerant R410A

Do not use the existing refrigerant piping.

The old refrigerant and lubricant in the existing piping contains a large amount of chlorine which may cause the lubricant deterioration of the new unit.

Use "low residual oil piping"

If there is a large amount of residual oil (hydraulic oil, etc.) inside the piping and joints, deterioration of the lubricant will result.

Store the piping indoors, and both ends of the piping sealed until just before brazing. (Leave elbow joints, etc. in their packaging.)

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

The refrigerant oil applied to flare and flange connections must be ester oil, ether oil or alkylbenzene oil in a small amount.

If large amount of mineral oil enters, that can cause deterioration of refrigerant oil etc.

Charge refrigerant from liquid phase of gas cylinder.

If the refrigerant is charged from gas phase, composition change may occur in refrigerant and the efficiency will be lowered.

Do not use refrigerant other than R410A.

If other refrigerant (R22 etc.) is used, chlorine in refrigerant can cause deterioration of refrigerant oil etc.

Use a vacuum pump with a reverse flow check valve.

Vacuum pump oil may flow back into refrigerant cycle and that can cause deterioration of refrigerant oil etc.

Use the following tools specifically designed for use with R410A refrigerant.

The following tools are necessary to use R410A refrigerant.

Tools for R410A				
Gauge manifold	Flare tool			
Charge hose	Size adjustment gauge			
Gas leak detector	Vacuum pump adaptor			
Torque wrench	Electronic refrigerant			
	charging scale			

Handle tools with care.

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

Do not use a charging cylinder.

If a charging cylinder is used, the composition of refrigerant will change and the efficiency will be lowered.

Use the specified refrigerant only.

Never use any refrigerant other than that specified.

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.

Correct refrigerant is specified in the manuals and on the spec labels provided with our products.

We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

Ventilate the room if refrigerant leaks during operation. If refrigerant comes into contact with a flame, poisonous gases will be released.

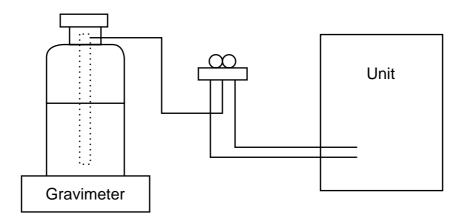

[1] Cautions for service

- (1) Perform service after recovering the refrigerant left in unit completely.
- (2) Do not release refrigerant in the air.
- (3) After completing service, charge the cycle with specified amount of refrigerant.
- (4) When performing service, install a filter drier simultaneously. Be sure to use a filter drier for new refrigerant.

[2] Additional refrigerant charge

When charging directly from cylinder

- · Check that cylinder for R410A on the market is syphon type.
- · Charging should be performed with the cylinder of syphon stood vertically. (Refrigerant is charged from liquid phase.)

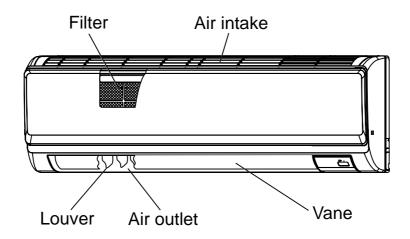

[3] Service tools

Use the below service tools as exclusive tools for R410A refrigerant.

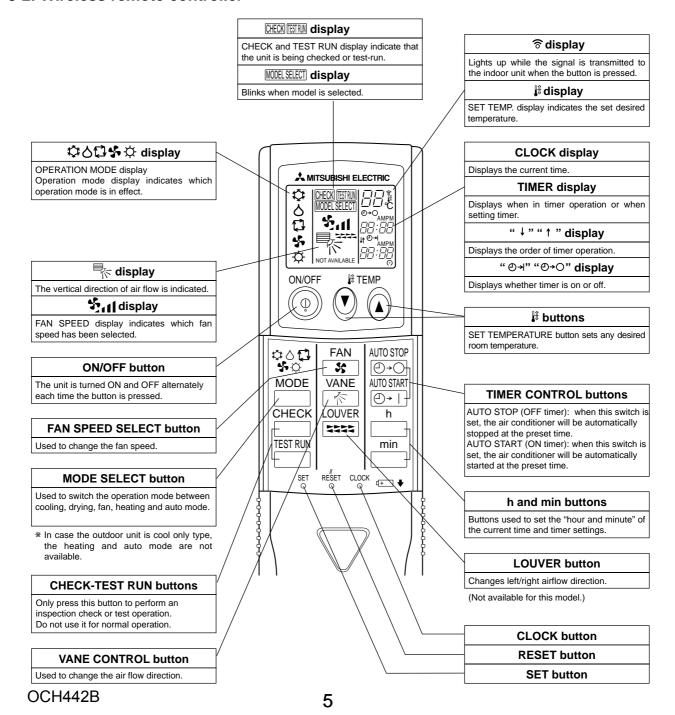

No.	Tool name	Specifications			
		· Only for R410A			
1	Gauge manifold	· Use the existing fitting specifications. (UNF1/2)			
		· Use high-tension side pressure of 5.3 MPa·G or over.			
(A)	Charge hose	· Only for R410A			
2	Charge hose	· Use pressure performance of 5.09 MPa·G or over.			
3	Electronic scale	_			
4	Gas leak detector	· Use the detector for R134a, R407C or R410A.			
(5)	Adaptor for reverse flow check	· Attach on vacuum pump.			
6	Refrigerant charge base	_			
	Defrice went entire des	· Only for R410A · Top of cylinder (Pink)			
7	Refrigerant cylinder	· Cylinder with syphon			
8	Refrigerant recovery equipment	_			

PART NAMES AND FUNCTIONS

3-1. Indoor unit

3-2. Wireless remote controller

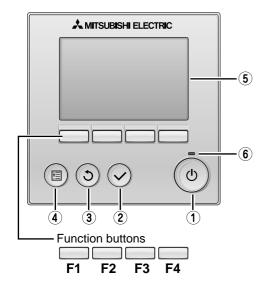

3-3. WIRED REMOTE CONTROLLER <PAR-30MAA/PAR-31MAA>

Wired remote controller function

* The functions which can be used are restricted according to the model.

○: Supported X: Unsupported

	Function	PAR-30MAA/	PAR-30MAA/PAR-31MAA		
	Function	Slim	City multi	PAR-21MAA	
Body	Product size H × W × D (mm)	120 × 1	20 × 19	120 × 130 × 19	
	LCD	Full Do	ot LCD	Partial Dot LCD	
	Backlight)	×	
Energy-saving	Energy-saving operation schedule	0	×	×	
Automatic return to the preset temperature				×	
Restriction	Setting the temperature range restriction	0		0	
Function	Operation lock function	0		0	
	Weekly timer		×		
	On / Off timer)	0	
	High Power	0	×	×	
	Manual vane angle			0	

1 ON / OFF button

Press to turn ON/OFF the indoor unit.

② SELECT button

Press to save the setting.

(3) RETURN button

Press to return to the previous screen.

(4) MENU button

Press to bring up the Main menu.

(5) Backlit LCD

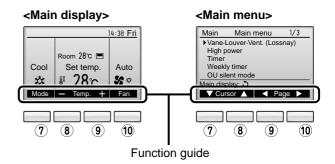

Operation settings will appear.

When the backlight is off, pressing any button turns the backlight on and it will stay lit for a certain period of time depending on the screen.

When the backlight is off, pressing any button turns the backlight on and does not perform its function. (except for the \bigcirc (ON / OFF) button)

The functions of the function buttons change depending on the screen. Refer to the button function guide that appears at the bottom of the LCD for the functions they serve on a given screen.

When the system is centrally controlled, the button function guide that corresponds to the locked button will not appear.

6 ON / OFF lamp

This lamp lights up in green while the unit is in operation. It blinks while the remote controller is starting up or when there is an error.

7 Function button F1

Main display: Press to change the operation mode.

Main menu: Press to move the cursor down.

8 Function button F2

Main display: Press to decrease temperature.

Main menu: Press to move the cursor up.

9 Function button F3

Main display: Press to increase temperature.

Main menu: Press to go to the previous page.

10 Function button | F4

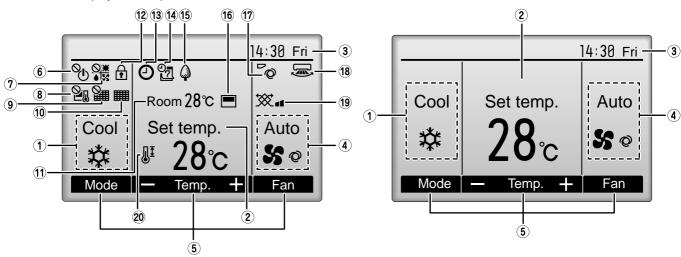

Main display: Press to change the fan speed. Main menu: Press to go to the next page.

The main display can be displayed in two different modes: "Full" and "Basic".

The factory setting is "Full". To switch to the "Basic" mode, change the setting on the Main display setting.

<Full mode>

* All icons are displayed for explanation.

1 Operation mode

Indoor unit operation mode appears here.

2 Preset temperature

Preset temperature appears here.

(3) Clock (See the Installation Manual.)

Current time appears here.

4 Fan speed

Fan speed setting appears here.

(5) Button function guide

Functions of the corresponding buttons appear here.

Appears when the ON/OFF operation is centrally controlled.

Appears when the operation mode is centrally controlled.

Appears when the preset temperature is centrally controlled.

Appears when the filter reset function is centrally controlled.

10

Indicates when filter needs maintenance.

(1) Room temperature (See the Installation Manual.)

Current room temperature appears here.

12

<Basic mode>

Appears when the buttons are locked.

13 🕘

Appears when the On/Off timer or Night setback function is enabled.

(14) **0.**7

Appears when the Weekly timer is enabled.

15 4

Appears while the units are operated in the energy-save mode.

16

Appears when the built-in thermistor on the remote controller is activated to monitor the room temperature.

appears when the thermistor on the indoor unit is activated to monitor the room temperature.

17 %

Indicates the vane setting.

18 🐷

Indicates the louver setting.

19 🕱

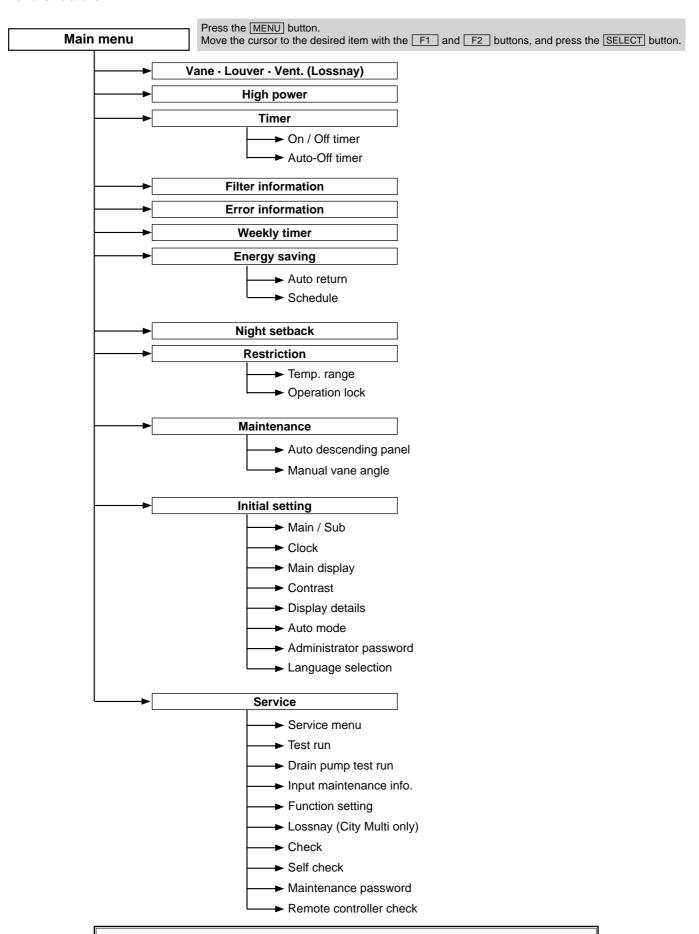

Indicates the ventilation setting.

20 JĪ

Appears when the preset temperature range is restricted.

Most settings (except ON / OFF, mode, fan speed, temperature) can be made from the Menu screen.

Menu structure

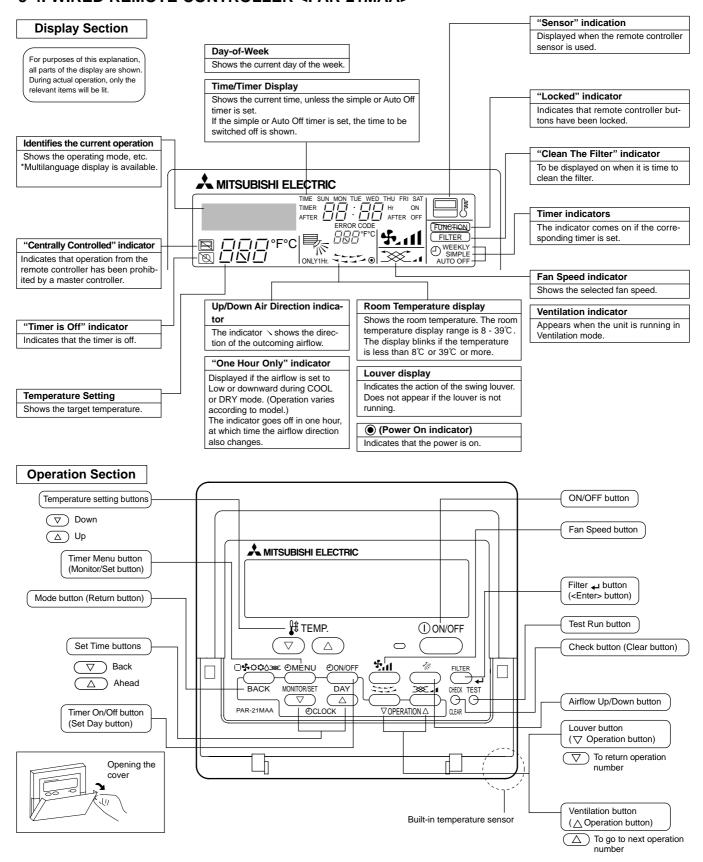

Main menu list

Setting and display items		Setting details			
Vane · Louver · Vent. (Lossnay)		Use to set the vane angle. • Select a desired vane setting from five different settings. Use to turn ON / OFF the louver. • Select a desired setting from "ON" and "OFF." Use to set the amount of ventilation.			
		Select a desired setting from "Off," "Low," and "High."			
High power		Use to reach the comfortable room temperature quickly. • Units can be operated in the High-power mode for up to 30 minutes.			
Timer	On/Off timer	Use to set the operation On/Off times. • Time can be set in 5-minute increments. * Clock setting is required.			
	Auto-Off timer	Use to set the Auto-Off time. • Time can be set to a value from 30 to 240 in 10-minute increments.			
Filter informa	tion	Use to check the filter status. • The filter sign can be reset.			
Error informa	tion	Use to check error information when an error occurs. • Error code, error source, refrigerant address, unit model, manufacturing number, contact information (dealer's phone number) can be displayed. * The unit model, manufacturing number, and contact information need to be registered in advance to be displayed.			
Weekly timer		Use to set the weekly operation On / Off times. • Up to eight operation patterns can be set for each day. * Clock setting is required. * Not valid when the On/Off timer is enabled.			
Energy saving	Auto return	Use to get the units to operate at the preset temperature after performing energy-save operation for a specified time period. • Time can be set to a value from 30 and 120 in 10-minute increments. * This function will not be valid when the preset temperature ranges are restricted.			
Schedule		Set the start/stop times to operate the units in the energy-save mode for each day of the week, and set the energy-saving rate. • Up to four energy-save operation patterns can be set for each day. • Time can be set in 5-minute increments. • Energy-saving rate can be set to a value from 0% or 50 to 90% in 10% increments. * Clock setting is required.			
Night setback		Use to make Night setback settings. • Select "Yes" to enable the setting, and "No" to disable the setting. The temperature range and the start/stop times can be set. * Clock setting is required.			
Restriction	Temp. range	Use to restrict the preset temperature range. • Different temperature ranges can be set for different operation modes.			
	Operation lock	Use to lock selected functions. • The locked functions cannot be operated.			
Maintenance	Auto descending panel	Auto descending panel (Optional parts) Up / Down you can do.			
	Manual vane angle	Use to set the vane angle for each vane to a fixed position.			
Initial setting	Main/Sub	When connecting two remote controllers, one of them needs to be designated as a sub controller.			
	Clock	Use to set the current time.			
	Main display	Use to switch between "Full" and "Basic" modes for the Main display. • The default setting is "Full."			
	Contrast	Use to adjust screen contrast.			

Setting and display items		Setting details
Initial setting	Display details	Make the settings for the remote controller related items as necessary. Clock: The factory settings are "Yes" and "24h" format. Temperature: Set either Celsius (°C) or Fahrenheit (°F). Room temp.: Set Show or Hide. Auto mode: Set the Auto mode display or Only Auto display.
	Auto mode	Whether or not to use the AUTO mode can be selected by using the button. This setting is valid only when indoor units with the AUTO mode function are connected.
	Administrator password	The administrator password is required to make the settings for the following items. • Timer setting • Energy-save setting • Weekly timer setting • Restriction setting • Outdoor unit silent mode setting • Night set back
	Language selection	Use to select the desired language.
Service	Test run	Select "Test run" from the Service menu to bring up the Test run menu. • Test run • Drain pump test run
	Input maintenance	Select "Input maintenance Info." from the Service menu to bring up the Maintenance information screen. The following settings can be made from the Maintenance Information screen. Model name input • Serial No. input • Dealer information input
	Function setting	Make the settings for the indoor unit functions via the remote controller as necessary.
	LOSSNAY setting (City Multi only)	This setting is required only when the operation of City Multi units is interlocked with LOSSNAY units.
	Check	Error history: Display the error history and execute delete error history. Refrigerant leak check: Refrigerant leaks can be judged. Smooth maintenance: The indoor and outdoor maintenance data can be displayed. Request cord: Details of the operation data including each thermistor temperature and error history can be checked.
	Self check	Error history of each unit can be checked via the remote controller.
	Maintenance password	Take the following steps to change the maintenance password.
	Remote controller check	When the remote controller does not work properly, use the remote controller checking function to troublushoot the problem.

3-4. WIRED REMOTE CONTROLLER <PAR-21MAA>

Note:

- "PLEASE WAIT" message
 - This message is displayed for approximately 3 minutes when power is supplied to the indoor unit or when the unit is recovering from a power failure.
- "NOT AVAILABLE" message
- This message is displayed if an invalid button is pressed (to operate a function that the indoor unit does not have).

 If a single remote controller is used to operate multiple indoor units simultaneously that are different types, this message will not be displayed as

OCH442B 11

far as any of the indoor units is equipped with the function.

LED on indoor board for service

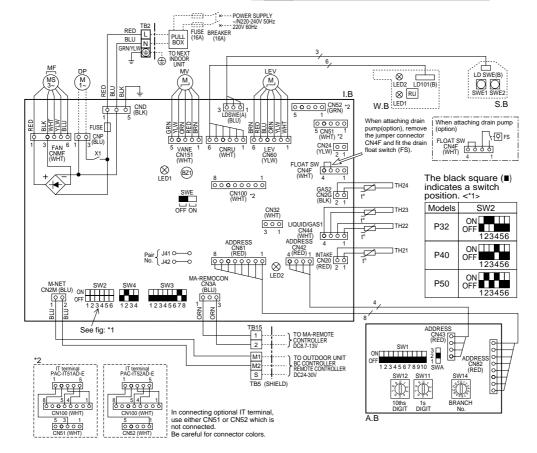

Mark	Meaning	Function
LED1	Main power supply	Main power supply (Indoor unit: 220-240V) Power on → lamp is lit
LED2	Power supply for MA-Remote controller	Power supply for MA-Remote controller on → lamp is lit

- At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- In case of using MA-Remote controller, please connect to TB15.
 (Remote controller wire is non-polar.)
- 3. In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)

- 6. The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the fig. *1.

TROUBLESHOOTING

8-1. HOW TO CHECK THE PARTS

PKFY-P32VHM-E PKFY-P40VHM-E PKFY-P50VHM-E PKFY-P32VHM-ER1 PKFY-P40VHM-ER1 PKFY-P50VHM-ER1 PKFY-P32VHM-ER2 PKFY-P40VHM-ER2 PKFY-P50VHM-ER2

Parts name Check points								
Room temperature thermistor (TH21)	Disconnect the connector then measure the resistance with a tester. (At the ambient temperature 10°C - 30°C)							
Liquid pipe temperature thermistor (TH22)	Normal		Abnormal		Refer to the next page for the details.			
Gas pipe temperature thermistor (TH23 ,24)	4.3kΩ~9.6k	Ω Ο	Open or short		There is the float page for the details.			
Vane motor (MV)	Measure the re	esistance betw	een the termir	nals with a tes	ter. (Coil temperature	e 25℃)		
② Red ———————————————————————————————————	Normal				Abnormal			
4 Yellow Orange Green	①-② Brown-Red			①-⑤ Brown-Green	Open or short			
Connect pin No. 3 \$		350Ω	± 7%					
Fan motor (MF) Refer to 8-1-3.								
Linear expansion valve (LEV) CN60 Disconnect the connector then measure the resistance value with a tester. (Coil temperature 20°C)								
White 1 Yellow 2		Normal						
LEV Orange 3 Blue 4	(1)-(5) White-Red	(2)-(6) Yellow-Brown	(3)-(5) Orange-Red	(4)-(6) Blue-Brown	Open or short			
Red 5 Brown 6		200Ω ± 10%						

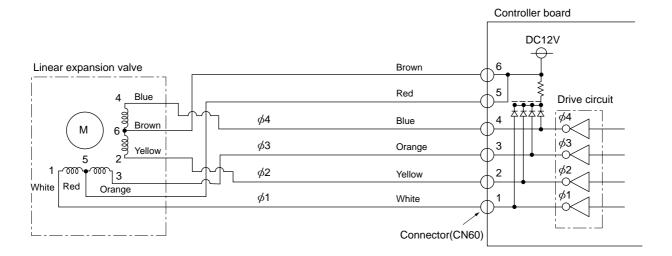

8-1-1. Thermistor

8-1-2. Liner expansion valve

① Operation summary of the linear expansion valve

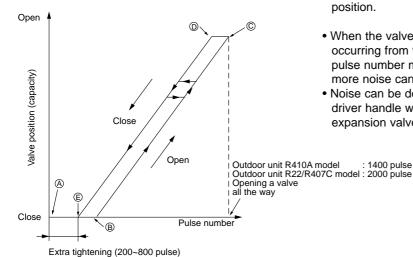

- Linear expansion valve opens/closes through stepping motor after receiving the pulse signal from the indoor controller board.
- Valve position can be changed in proportion to the number of pulse signal.
- <Connection between the indoor controller board and the linear expansion valve>

<Output pulse signal and the valve operation>

Output	Output						
(Phase)	1	2	3	4			
φ1	ON	OFF	OFF	ON			
φ2	ON	ON	OFF	OFF			
φ3	OFF	ON	ON	OFF			
φ4	OFF	OFF	ON	ON			

② Linear expansion valve operation

Closing a valve : $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1$ Opening a valve : $4 \rightarrow 3 \rightarrow 2 \rightarrow 1 \rightarrow 4$ The output pulse shifts in above order.

- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.
- When the switch is turned on, 2200 pulse closing valve signal will be sent till it goes to point

 in order to define the valve position.
- When the valve moves smoothly, there is no noise or vibration occurring from the linear expansion valves; however, when the pulse number moves from © to @ or when the valve is locked, more noise can be heard than in a normal situation.
- Noise can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve.

③ Troubleshooting

Symptom	Check points	Countermeasures
Operation circuit failure of the micro processor	Disconnect the connector on the controller board, then connect LED for checking.	Exchange the indoor controller board in case of drive circuit failure.
Linear expansion valve mechanism is locked.	Motor will idle and make a ticking noise when the motor is operated while the linear expansion valve is locked. This ticking sound is the sign of the abnormality.	Exchange the linear expansion valve.
Short or breakage of the motor coil of the linear expansion valve	Measure the resistance between each coil (white-red, yellow-brown, orange-red, blue-brown) using a tester. It is normal if the resistance is in the range of $200\Omega \pm 10\%$.	Exchange the linear expansion valve.
Valve does not close completely.	To check the linear expansion valve, operate the indoor unit in fan mode and at the same time operate other indoor units in cooling mode, then check the pipe temperature < liquid pipe temperature > of the indoor unit by the outdoor multi controller board operation monitor. During fan operation, linear expansion valve is closed completely and if there is any leaking, detecting temperature of the thermistor will go lower. If the detected temperature indicated in the remote controller, it means the valve is not closed all the way. It is not necessary to exchange the linear expansion valve, if the leakage is small and not affecting normal operation.	If large amount of refriger- ant is leaked, exchange the linear expansion valve.
Wrong connection of the connector or contact failure	Check the color of lead wire and missing terminal of the connector.	Disconnect the connector at the controller board, then check the continuity.

8-1-3. DC Fan motor (fan motor/indoor controller circuit board)

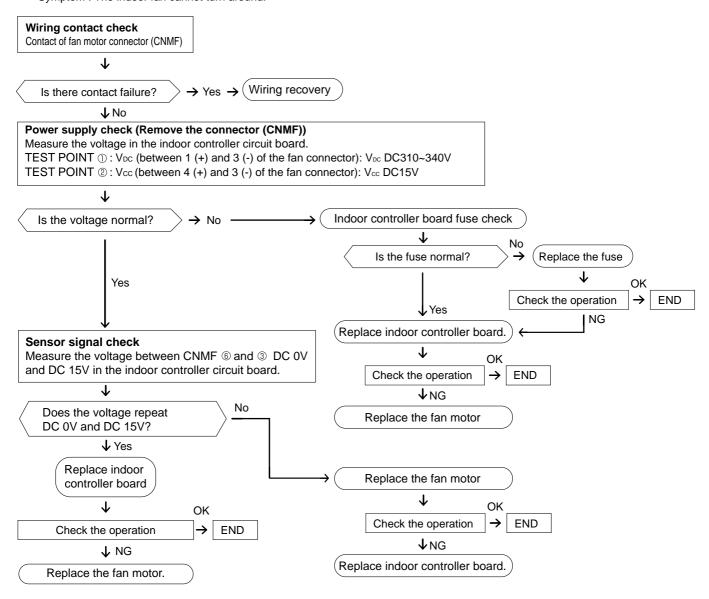

Check method of DC fan motor (fan motor/indoor controller circuit board)

- ① Notes
 - · High voltage is applied to the connecter (CNMF) for the fan motor. Pay attention to the service.
 - Do not pull out the connector (CNMF) for the motor with the power supply on.

(It causes trouble of the indoor controller circuit board and fan motor.)

② Self check

Symptom: The indoor fan cannot turn around.

8-2. FUNCTION OF DIP SWITCH

PKFY-P32VHM-E PKFY-P40VHM-E PKFY-P50VHM-E PKFY-P32VHM-ER1 PKFY-P40VHM-ER1 PKFY-P50VHM-ER1 PKFY-P50VHM-ER2

The black square (\blacksquare) indicates a switch position.

Be careful when removing heavy parts.

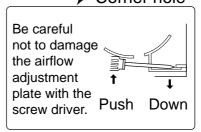

OPERATION PROCEDURE

1. REMOVING THE LOWER SIDE OF THE INDOOR UNIT FROM THE INSTALLATION PLATE

- (1) Remove the front panel.
- (2) Insert the screw driver to the corner hole at both left and right side as shown in the figure 1.
- (3) Push it up, then pull down the lower side of indoor unit and remove the hook.

PHOTOS & ILLUSTRATIONS

2. REMOVING THE FRONT PANEL

- (1) Press and unlock the knobs on both sides of the front panel and lift the front panel until it is level. Pull the hinges forward to remove the front panel. (See Photo 2)
- (2) Move the horizontal vanes in a downward direction.
- (3) Remove the screw caps of the panel. Remove the screws. (See Photo 1)
- (4) Hold the lower part of both ends of the panel and pull it slightly toward you, and then remove the panel by pushing it upward.

Photo 1

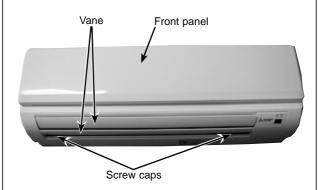

Photo 2

OPERATION PROCEDURE

3. REMOVING THE INDOOR CONTROLLER BOARD AND WIRELESS CONTROLLER BOARD

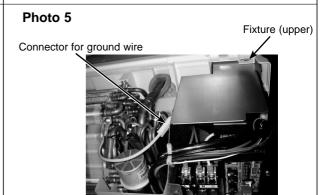

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the room temp. thermistor TH21. (See Photo 3)
- (3) Remove the electrical box covers (screw 4×12). (See Photo 3)
- (4) Disconnect the connectors on the indoor controller board.
- (5) Remove the switch board cover.
- (6) Pull out the indoor controller board toward you, then disconnect the rest of connectors.
 - Remove the indoor controller board and switch board.
- (7) Remove the holder of wireless controller board.
- (8) Disconnect the connector of wireless controller board and remove the wireless controller board from the holder.

Electrical box cover (top) Electrical box Screw (top cover) Photo 3 cover (side) Room temp. thermistor (TH21) Screw (side cover) Nozzle assembly Switch board cover Holder of wireless controller board Photo 4 Indoor controller board (I.B) Terminal block (TB2) **Terminal** block (TB5)

PHOTOS

4. REMOVING THE ELECTRICAL BOX

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box covers. (See Photo 3)
- (3) Remove the nozzle assembly. (Refer to procedure 5)
- (4) Disconnect the transmission wiring of TB5.
- (5) Disconnect the power supply wiring of TB2.
- (6) Disconnect the wiring of MA-remote controller (TB15).
- (7) Disconnect the connectors on the indoor controller board.
- (8) Disconnect the connector for the ground wire. (See Photo 5) $\,$
- (9) Pull the disconnected lead wire out from the electrical box.
- (10) Remove the screw of electrical box. (See Photo 6)
- (11) Push up the upper fixture (See Photo 5) catch to remove the box, then pull the right fixture (See Photo 4) and remove it from the box fixture.

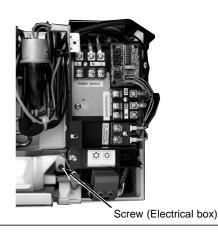

Room temp. thermistor (TH21)

Fixture (right)

Photo 6

Terminal block (TB15)

OPERATION PROCEDURE

5. REMOVING THE NOZZLE ASSEMBLY (with VANE and VANE MOTOR) AND DRAIN HOSE

- (1) Remove the front panel (Refer to procedure 2).
- (2) Remove the electrical box cover. (See Photo 3)
- (3) Disconnect the vane motor connector (CN151) on the indoor controller board.
- (4) Remove the corner box.
- (5) Pull the nozzle assembly and detach.
- (6) Push the fixture and remove the drain hose.

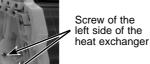

Electrical box cover (side), Photo 7 Electrical box cover (top) Screw (side cover) Screw (top cover) Switch board cover Holder of wireless (side Nozzle assembly controller board cover)

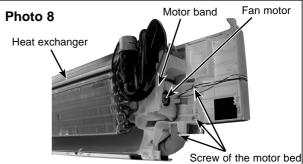

PHOTOS

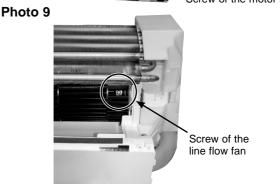

6. REMOVING THE INDOOR FAN MOTOR AND THE **LINE FLOW FAN**

- (1) Remove the front panel (Refer to procedure 2) and the corner box at right lower side.
- (2) Remove the electrical box (Refer to procedure 4) and the nozzle assembly (Refer to procedure 5).
- (3) Remove the screws fixing the motor bed. (See Photo 8)
- (4) Loosen the screw fixing the line flow fan. (See Photo 9)
- (5) Remove the motor bed together with fan motor and motor
- (6) Release the hooks of the motor band. Remove the motor band. Pull out the indoor fan motor.
- (7) Remove the screws fixing the left side of the heat exchanger. (See Photo 10)
- (8) Lift the heat exchanger, and pull out the line flow fan to the lower-left.

Photo 10

7. REMOVING THE VANE MOTOR

- (1) Remove the nozzle assembly. (Refer to procedure 5)
- (2) Remove the screws of the vane motor unit, and pull out the vane motor unit.
- (3) Remove the screws of the vane motor unit cover.
- (4) Remove the vane motor from the vane motor unit.
- (5) Disconnect the connector from the vane motor.

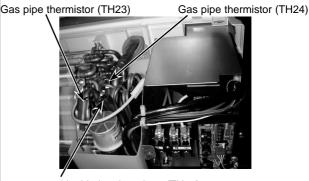

Screws of the vane Photo 11 motor unit

Screws of the vane motor unit cover

8. REMOVING THE LIQUID PIPE THERMISTOR AND **GAS PIPE THERMISTOR**

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 3)
- (3) Remove the motor band.
- (4) Cut the wiring fixed band.
- (5) Remove the liquid pipe thermistor and gas pipe thermistors.
- (6) Disconnect the connector (CN44) (CN2G) on the indoor controller board. (TH22 and TH23/CN44, TH24/CN2G)

Photo 12

Liquid pipe thermistor (TH22)

OPERATION PROCEDURE

9. REMOVING THE HEAT EXCHANGER AND LEV

- (1) Remove the front panel (Refer to procedure 2) and the corner panel at right lower side.
- (2) Remove the electrical box (Refer to procedure 4) and the nozzle assembly (Refer to procedure 5).
- (3) Remove the motor band.
- (4) Remove the pipe thermistors (Refer to procedure 8).
- (5) Disconnect the connector (CN60) on the indoor controller board and the connector for ground wire. (See Photo 5)
- (6) Remove the screws fixing the left side of the heat exchanger. (See Photo 9)
- (7) Remove the heat exchanger with LEV.

PHOTOS

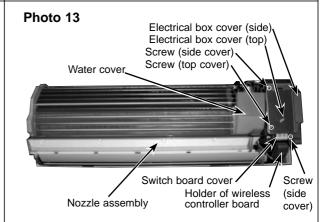

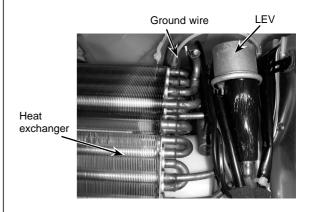

Photo 14

10. REMOVING THE ROOM TEMPERATURE THERMISTOR

- (1) Remove the front panel (Refer to procedure 2).
- (2) Remove the electrical box cover. (See Photo 3)
- (3) Remove the room temperature thermistor.
- (4) Disconnect the connector (CN20) on the indoor controller board.

NOTE: When room temp. thermistor is replaced, be sure to use service parts No. R01 N20 202.

Photo 16

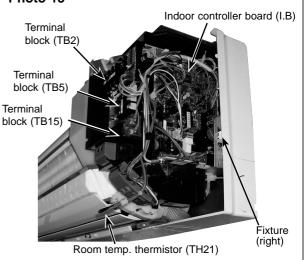

Room temp. thermistor (TH21)

Wire clip

Caution:

There is a case that room temp. thermistor (TH21) is fixed with electrical box side cover screw. Photo 15
