WY Series 16hp Water Cooled Condensing Unit
R410A Heat Pump

The WY Series has all the benefits of the Y Series using water cooled condensing units. It is also able to produce heat recovery via the water circuit between heat source units, making for a very economical system.

- **High COP's possible thanks to increased efficiency and careful control of the system, allowing the largest operational water circuit temperature band ever**
- **Combining WY with waste heat energy provides unique application solutions**
- **Condensing units can be situated indoors allowing greater design flexibility and no limitation on building size**
- **Single inverter compressor**
- **Improved pipe run of 150m with a total system pipe length of up to 300m**
- **High Sensible Cooling Function - By raising the off coil temperature, a 10% increase in sensible cooling capacity over standard operation is achievable, the result being greater comfort for occupants**
- **Now able to operate with closed loop ground source water temperatures, bore hole and slinky applications are now possible**
