PAR-FA32MA
(Signal receiving unit)

● It can operate in a group system without requiring address settings.

● When operating, it displays LED lamps. When errors occur, the error code can be shown by the LED flash count.

　＊: If an indoor unit with different functionality is operating inside the same group, please note there may be cases when functionality is partially disabled for batch control.

　＊: Wireless remote controllers can only be used for a single refrigerant system.

　＊: If you use a system controller to centrally control a group, you will need cross-wiring between indoor units when using a wireless remote controller.
Also ensure there is no difference between the group setting of the master system controller and the cross wiring across indoor units when wiring and setting cross wires.
