CITY MULTI

The WR2 system has double heat recovery potential, making this system very economical. Not only does it produce heat recovery from indoor units on the same refrigerant circuit, it also produces heat recovery via the water circuit between heat source units. The water cooled units benefit from a modular design approach.

Key Features

- High efficiency thanks to careful control of the system
- Large operational water circuit temperature band
- All the benefits of the R2 Series with water cooled condensing units, using inverter control
- Unique 2-pipe system allows simultaneous heating and cooling plus heat recovery between up to 40 indoor units as with the R2 system
- Total building heat recovery made possible by exchanging energy in both refrigerant, water circuits and waste heat
- Pipe run of 165m with a total system pipe length of up to 750m
- High Sensible Cooling Function
- Able to operate with closed loop and open loop ground source water temperatures, bore hole and slinky applications are possible
- Easy maintenance - front panel access to all PCB's
- Condensing units must be situated indoors
- Utilised with the HBC (City Multi, HVRF, O.U.)
