NOTE:
This service manual describes technical data of the outdoor units.
•As for indoor units MSZ-A09YV-E1 and MSZ-A12YV-E1, refer to the service manual OB327.
•As for indoor unit MCFZ-A12WV-E1, refer to the service manual OB344.

CE

Revision A:

- MUZ-A12YV-E1 and MUZ-A12YVH-E1 can be connected to MCFZ-A12WV-E1.
- Some mistakes were corrected.

1 TECHNICAL CHANGES

INFORMATION FOR THE AIR CONDITIONER WITH R410A REFRIGERANT

- This room air conditioner adopts an HFC refrigerant (R410A) which never destroys the ozone layer.
- Pay particular attention to the following points, though the basic installation procedure is same as that for R22 air conditioners.

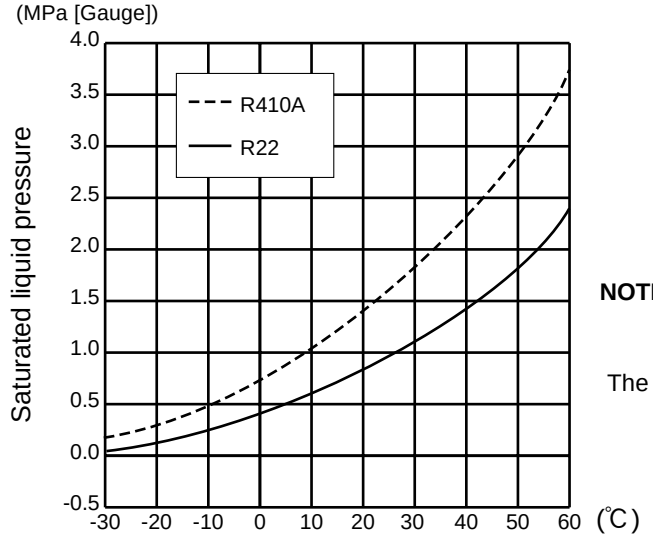
① As R410A has working pressure approximate 1.6 times as high as that of R22, some special tools and piping parts/ materials are required. Refer to the table below.
② Take sufficient care not to allow water and other contaminations to enter the R410A refrigerant during storage and installation, since it is more susceptible to contaminations than R22.
③ For refrigerant piping, use clean, pressure-proof parts/materials specifically designed for R410A. (Refer to 2. Refrigerant piping.)
④ Composition change may occur in R410A since it is a mixed refrigerant. When charging, charge liquid refrigerant to prevent composition change.

		New refrigerant	Previous refrigerant
Refrigerant	Refrigerant	R410A	R22
	Composition (Ratio)	HFC-32: HFC-125 (50%:50%)	R22 (100%)
	Refrigerant handling	Pseudo-azeotropic refrigerant	Single refrigerant
	Chlorine	Not included	Included
	Safety group (ASHRAE)	A1/A1	A1
	Molecular weight	72.6	86.5
	Boiling point (℃)	-51.4	-40.8
	Steam pressure [25℃](Mpa)	1.557	0.94
	Saturated steam density [25℃](Kg/m³)	64	44.4
	Combustibility	Non combustible	Non combustible
	ODP ※1	0	0.055
	GWP ※2	1730	1700
	Refrigerant charge method	From liquid phase in cylinder	Gas phase
	Additional charge on leakage	Possible	Possible
Refrigerating oil	Kind	Incompatible oil	Compatible oil
	Color	Non	Light yellow
	Smell	Non	Non

※1 :Ozone Destruction Parameter : based on CFC-11
※2 :Global Warmth Parameter : based on CO_2

	New Specification	Current Specification
Compressor	The incompatible refrigerating oil easily separates from refrigerant and is in the upper layer inside the suction muffler. Raising position of the oil back hole enables to back the refrigerating oil of the upper layer to flow back to the compressor. 	Since refrigerant and refrigerating oil are compatible each, refrigerating oil backs to the compressor through the lower position oil back hole. 
NOTE : The unit of pressure has been changed to MPa on the international system of units(SI unit system).
The conversion factor is: **1(MPa [Gauge]) =10.2(kgf/㎠ [Gauge])**

Conversion chart of refrigerant temperature and pressure



NOTE : The unit of pressure has been changed to MPa on the international system of units(SI unit system).

The conversion factor is: **1(MPa [Gauge]) =10.2(kgf/㎠ [Gauge])**

1.Tools dedicated for the air conditioner with R410A refrigerant

The following tools are required for R410A refrigerant. Some R22 tools can be substituted for R410A tools.
The diameter of the service port on the stop valve in outdoor unit has been changed to prevent any other refrigerant being charged into the unit. Cap size has been changed from 7/16 UNF with 20 threads to 1/2 UNF with 20 threads.

R410A tools	Can R22 tools be used?	Description
Gauge manifold	No	R410A has high pressures beyond the measurement range of existing gauges. Port diameters have been changed to prevent any other refrigerant from being charged into the unit.
Charge hose	No	Hose material and cap size have been changed to improve the pressure resistance.
Gas leak detector	No	Dedicated for HFC refrigerant.
Torque wrench	Yes	6.35 mm and 9.52 mm
	No	12.7 mm
Flare tool	Yes	Clamp bar hole has been enlarged to reinforce the spring strength in the tool.
Flare gauge	New	Provided for flaring work (to be used with R22 flare tool).
Vacuum pump adapter	New	Provided to prevent the back flow of oil. This adapter enables you to use vacuum pumps.
Electronic scale for refrigerant charging	New	It is difficult to measure R410A with a charging cylinder because the refrigerant bubbles due to high pressure and high-speed vaporization

No : Not Substitutable for R410A Yes : Substitutable for R410A

2.Refrigerant piping

① Specifications

Use the refrigerant pipes that meet the following specifications.

Pipe	Outside diameter mm	Wall thickness	Insulation material
For liquid	6.35	0.8 mm	Heat resisting foam plastic Specific gravity 0.045 Thickness 8 mm
For gas	9.52	0.8 mm	
	12.7	0.8 mm	

• Use a copper pipe or a copper-alloy seamless pipe with a thickness of 0.8 mm. Never use any pipe with a thickness less than 0.8mm, as the pressure resistance is insufficient.

② Flaring work and flare nut
Flaring work for R410A pipe differs from that for R22 pipe.
For details of flaring work, refer to Installation manual “FLARING WORK”.

Pipe diameter	Dimension of flare nut	
mm	R410A	R22
6.35	17	17
9.52	22	22
12.7	26	24

3.Refrigerant oil
Apply the special refrigeration oil (accessories: packed with indoor unit) to the flare and the union seat surfaces.

4.Air purge
- Do not discharge the refrigerant into the atmosphere.
  Take care not to discharge refrigerant into the atmosphere during installation, reinstallation, or repairs to the refrigerant circuit.
- Use the vacuum pump for air purging for the purpose of environmental protection.

5.Additional charge
For additional charging, charge the refrigerant from liquid phase of the gas cylinder.
If the refrigerant is charged from the gas phase, composition change may occur in the refrigerant inside the cylinder and the outdoor unit. In this case, ability of the refrigerating cycle decreases or normal operation can be impossible. However, charging the liquid refrigerant all at once may cause the compressor to be locked. Thus, charge the refrigerant slowly.

8 PERFORMANCE CURVES

MUZ-A09YV -E1 MUZ-A12YV -E1
MUZ-A09YVH -E1 MUZ-A12YVH -E1

The standard data contained in these specifications apply only to the operation of the air conditioner under normal conditions. Since operating conditions vary according to the areas where these units are installed. The following information has been provided to clarify the operating characteristics of the air conditioner under the conditions indicated by the performance curve.

(1) GUARANTEED VOLTAGE

198 ~ 264V, 50Hz

(2) AIR FLOW

Air flow should be set at MAX.

(3) MAIN READINGS

(1) Indoor intake air wet-bulb temperature :	°C WB	Cooling
(2) Indoor outlet air wet-bulb temperature :	°C WB	
(3) Outdoor intake air dry-bulb temperature :	°C DB	
(4) Total input:	W	
(5) Indoor intake air dry-bulb temperature :	°C DB	Heating
(6) Outdoor intake air wet-bulb temperature :	°C WB	
(7) Total input :	W	

Indoor air wet/dry-bulb temperature difference on the left side of the chart on next page shows the difference between the indoor intake air wet/dry-bulb temperature and the indoor outlet air wet/dry-bulb temperature for your reference at service.

How to measure the indoor air wet-bulb / dry-bulb temperature difference

1. Attach at least 2 sets of wet and dry-bulb thermometers to the indoor air intake as shown in the figure, and at least 2 sets of wet and dry-bulb thermometers to the indoor air outlet. The thermometers must be attached to the position where air speed is high.
2. Attach at least 2 sets of wet and dry-bulb thermometers to the outdoor air intake. Cover the thermometers to prevent direct rays of the sun.
3. Check that the air filter is cleaned.
4. Open windows and doors of room.
5. Press the EMERGENCY OPERATION switch once (twice) to start the EMERGENCY COOL (HEAT) MODE.
6. When system stabilizes after more than 15 minutes, measure temperature and take an average temperature.
7. 10 minutes later, measure temperature again and check that the temperature does not change.

OUTDOOR LOW PRESSURE AND OUTDOOR UNIT CURRENT

<How to operate fixed-frequency operation (Test run operation)>
1. Press the EMERGENCY OPERATION switch to COOL or HEAT mode (COOL : Press once, HEAT : Press twice).
2. Test run operation starts and continue to operate for 30 minutes.
3. Compressor operates at rated frequency in COOL mode or 58Hz in HEAT mode.
4. Indoor fan operates at High speed.
5. After 30 minutes, test run operation finishes and EMERGENCY OPERATION starts (Operation frequency of compressor varies).
6. To cancel test run operation (EMERGENCY OPERATION), press the EMERGENCY OPERATION switch or any button on remote controller.

NOTE : The unit of pressure has been changed to MPa on the international system of units (SI unit system).
The conversion factor is: **1(MPa [Gauge]) =10.2(kgf/㎠ [Gauge])**

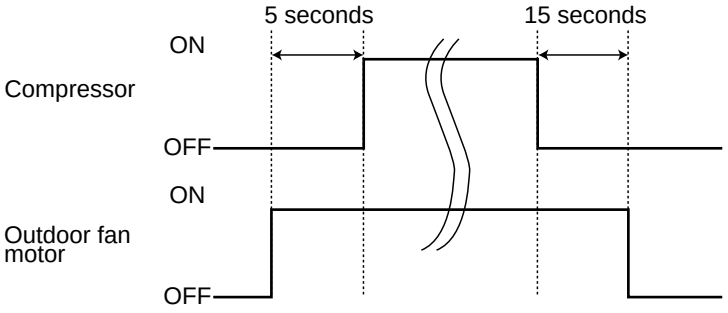
9 ACTUATOR CONTROL

MUZ-A09YV -E1 MUZ-A12YV -E1
MUZ-A09YVH -E1 MUZ-A12YVH -E1

9-1. Outdoor fan motor control

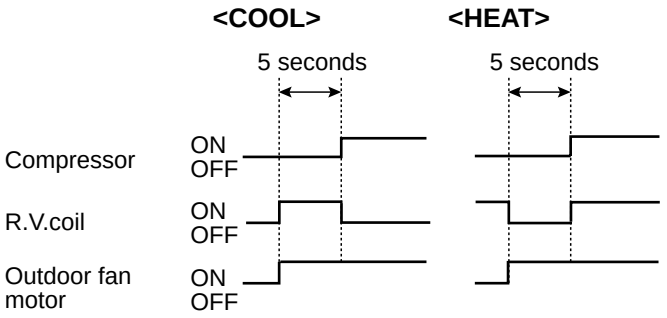
The AC fan motor turns ON/OFF, interlocking with the compressor.
[ON] The AC fan motor turns ON 5 seconds before the compressor starts up.
[OFF] The AC fan motor turns OFF 15 seconds after the compressor has stopped running.



9-2. R.V. coil control

Heating . . . . . ON
Cooling. . . . . OFF
Dry. . . . . OFF

NOTE: The 4-way valve reverses for 5 seconds right before start-up of the compressor.



9-3. Relation between main sensor and actuator

Sensor	Purpose	Actuator					
		Compressor	LEV	Outdoor fan motor	R.V.coil	Indoor fan motor	Defrost heater
Discharge temperature thermistor	Protection	○	○				
Indoor coil temperature thermistor	Cooling : Coil frost prevention	○					
	Heating : High pressure protection	○	○				
Defrost thermistor	Cooling : High pressure protection	○	○				
	Heating : Defrosting	○	○	○	○	○	
Fin temperature thermistor	Protection	○		○			
Ambient temperature thermistor	Cooling : Low ambient temperature operation	○	○	○			
	Heating : Defrosting (Heater)						○

10 SERVICE FUNCTIONS

MUZ-A09YV -E1 MUZ-A12YV -E1
MUZ-A09YVH -E1 MUZ-A12YVH -E1

CHANGE IN DEFROST SETTING

<JS> When the JS wire of the outdoor Inverter P.C. board is cut/ soldered, the defrost finish temperature is changed.
(Refer to page 32.)

Jumper wire		Defrost finish temperature (Initial setting)	Model
JS	none (cut)	8℃	**MUZ-A09YVH - E1 (Serial number 4000531~)** **MUZ-A12YVH - E1 (Serial number 4000211~)**
	soldered	5℃	**MUZ-A09YV - E1** **MUZ-A12YV - E1** **MUZ-A09YVH - E1 (Serial number ~4000530)** **MUZ-A12YVH - E1 (Serial number ~4000210)**

11 TROUBLESHOOTING

MUZ-A09YV -E1 MUZ-A12YV -E1
MUZ-A09YVH -E1 MUZ-A12YVH -E1

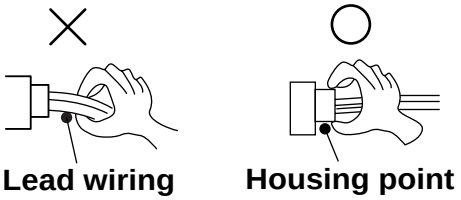
11-1. Cautions on troubleshooting

1. Before troubleshooting, check the following:

1) Check the power supply voltage.
2) Check the indoor/outdoor connecting wire for mis-wiring.

2. Take care the following during servicing.

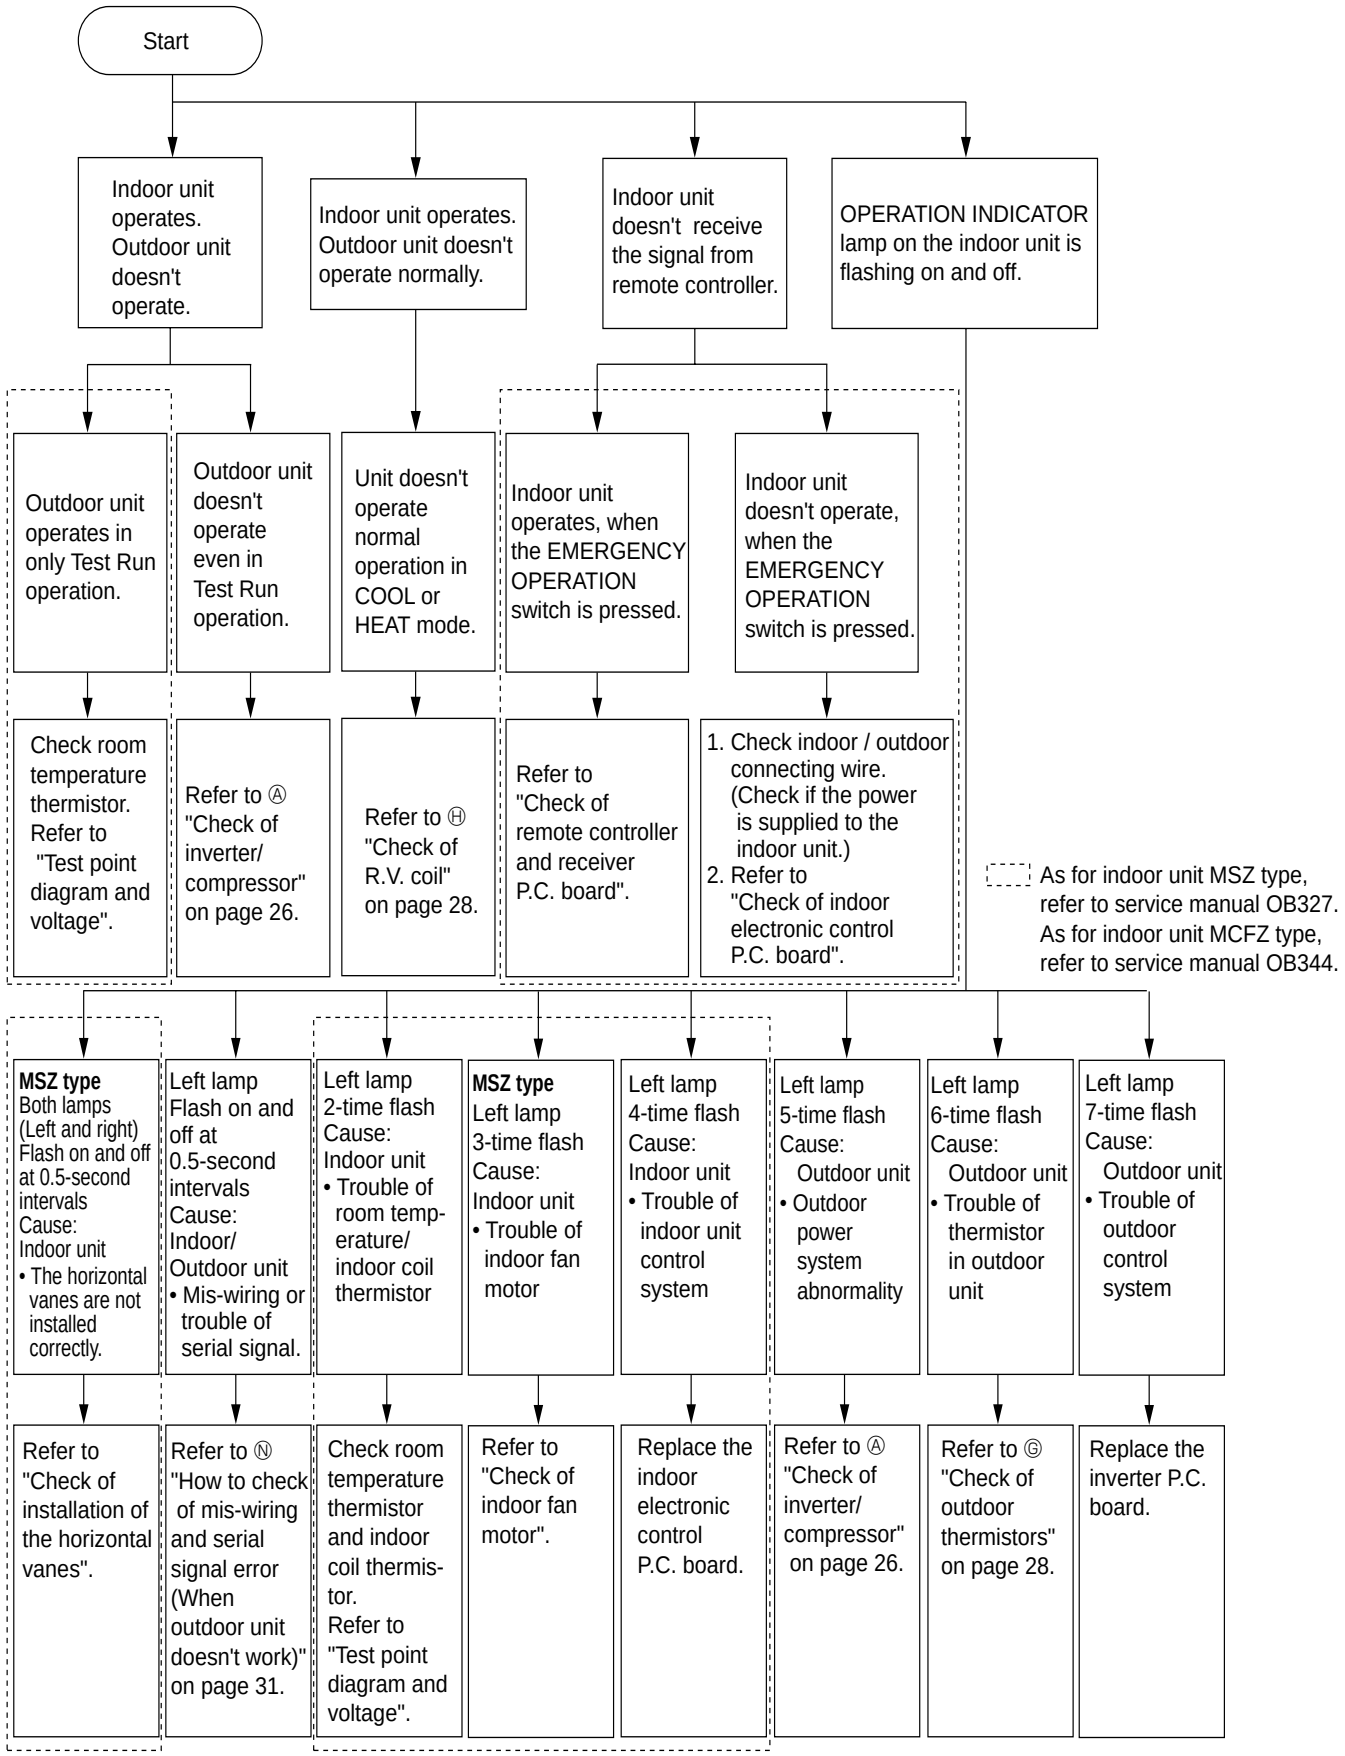
1) Before servicing the air conditioner, be sure to first turn off the remote controller to stop the main unit, and then after confirming the horizontal vane is closed, turn off the breaker and / or disconnect the power plug.
2) Be sure to turn OFF the power supply before removing the front panel, the cabinet, the top panel, and the electronic control P.C. board.
3) When removing the electrical parts, be careful to the residual voltage of smoothing capacitor.
4) When removing the electronic control P.C. board, hold the edge of the board with care NOT to apply stress on the components.
5) When connecting or disconnecting the connectors, hold the housing of the connector. DO NOT pull the lead wires.



3. Troubleshooting procedure

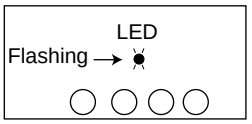
1) First, check if the OPERATION INDICATOR lamp on the indoor unit is flashing on and off to indicate an abnormality. To make sure, check how many times the abnormality indication is flashing on and off before starting service work.
2) Before servicing check that the connector and terminal are connected properly.
3) If the electronic control P.C. board is supposed to be defective, check the copper foil pattern for disconnection and the components for bursting and discoloration.
4) When troubleshooting, refer to the flow chart on page 23 and check table on page 24.

11-2. Instruction of troubleshooting



1. Troubleshooting check table

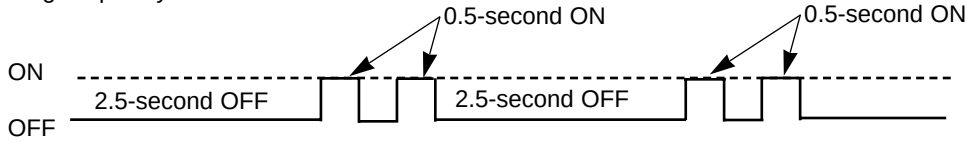
<Inverter P.C. board>



NOTE 1. The location of LED is illustrated at the right figure. Refer to page 32.
2. LED lights up during normal operation.

No.	Symptom	LED indication	Abnormal point/ Condition	Detection method	Checkpoint
1	Outdoor unit does not operate	1-time flash every 2.5 seconds NOTE: For abnormality location, refer to 'Indoor troubleshooting check table'. Refer to service manual OB327.	Outdoor power system	When compressor has stopped by overcurrent protection within 1 minute 3 times in a row after compressor start-up, unit stops.	· Check stop valve. · Reconnect connectors. · Refer to Ⓐ "How to check inverter/ compressor" on page 26.
2			Outdoor thermistors	When discharge temperature thermistor, fin temperature thermistor or defrost thermistor shorts or opens during compressor running, compressor stops and restarts 3 minutes later.	· Refer to Ⓖ "Check of outdoor thermistors" on page 28.
3			Outdoor control system	When nonvolatile memory data cannot be read properly, compressor stops and restarts 3 minutes later.	Replace inverter P.C. board after check of Ⓐ "How to check inverter/ compressor" on page 26 and Ⓖ "Check of outdoor thermistors" on page 28.
4			Bus-bar voltage	When the bus-bar voltage of inverter cannot be detected normally.	Refer to Ⓐ "How to check inverter/ compressor" on page 26.
5	'Outdoor unit stops and restarts 3 minutes later' is repeated	2-time flash 2.5 seconds OFF	Overcurrent protection	When 12A(MUZ-A09YV, MUZ-A09YVH)/ 20A(MUZ-A12YV, MUZ-A12YVH) current flows into power transistor module, compressor stops and restarts 3 minutes later.	· Check stop valve. · Reconnect connectors. · Refer to Ⓐ "How to check inverter/ compressor" on page 26.
6		3-time flash 2.5 seconds OFF	Discharge temperature overheat protection	When discharge temperature thermistor exceeds 116℃, compressor stops. Compressor can restart if discharge temperature thermistor reads 100℃ or less 3 minutes later.	· Check refrigerant circuit and refrigerant amount. · Refer to Ⓖ "Check of outdoor thermistors" on page 28. · Refer to Ⓛ "Check of LEV" on page 30.
7		4-time flash 2.5 seconds OFF	Fin temperature thermistor overheat protection	When temperature at heat sink exceeds 83℃ or temperature of inverter P.C. board exceeds 79℃, compressor stops and restarts 3 minutes later.	· Check around outdoor unit. · Check outdoor unit air passage. · Refer to Ⓘ "Check of outdoor fan motor" on page 29.
8		5-time flash 2.5 seconds OFF	High pressure protection	When indoor coil thermistor exceeds 70℃. When the defrost thermistor exceeds 70℃ in COOL mode.	· Check refrigerant circuit and refrigerant amount. · Check stop valve.
9		8-time flash 2.5 seconds OFF	Compressor sinusoidal current	When the waveform of compressor current is distorted.	· Check stop valve. · Reconnect connector. · Refer to Ⓐ "How to check inverter/ compressor" on page 26.
10	Outdoor unit operates (at low frequency)	1-time flash 2.5 seconds OFF	Frequency drop by current protection	When current from power outlet exceeds 7A(MUZ-A09YV, MUZ-A09YVH)/ 9A(MUZ-A12YV, MUZ-A12YVH), compressor frequency lowers.	The unit is normal, but check the following. · Check if indoor filters are clogged. · Check if refrigerant is short. · Check if indoor/outdoor unit air circulation is short cycled.
11		3-time flash 2.5 seconds OFF	Frequency drop by high pressure protection	When indoor coil thermistor exceeds 55℃ in HEAT mode, compressor frequency lowers.	
			Frequency drop by defrosting in COOL mode	When indoor coil thermistor reads 6℃ or less in COOL mode, compressor frequency lowers.	
12		4-time flash 2.5 seconds OFF	Frequency drop by discharge temperature protection	When discharge temperature thermistor exceeds 110℃, compressor frequency lowers.	
13	Outdoor unit operates	5-time flash 2.5 seconds OFF	Outdoor thermistors	When ambient temperature thermistor shorts or opens during compressor running.	· Refer to Ⓖ "Check of outdoor thermistors" on page 28.
14		7-time flash 2.5 seconds OFF	Low discharge temperature protection	When discharge temperature has been 40℃ or less for 20 minutes.	· Refer to Ⓛ "Check of LEV" on page 30. · Check refrigerant circuit and refrigerant amount.
15		8-time flash 2.5 seconds OFF	PAM protection PAM: Pulse Amplitude Modulation	When the overcurrent flows into IGBT(Insulated Gate Bipolar transistor : TR821) or when the bus-bar voltage reaches 300V or more, PAM stops and restarts.	This is not malfunction. PAM protection will be activated in the following cases; ①Instantaneous power voltage drop (Short time power failure) ②When the power supply voltage is high.
16		9-time flash 2.5 seconds OFF	Inverter check mode	When the connector of compressor is disconnected, inverter check mode starts.	Check if the connector is correctly connected. Refer to Ⓐ "How to check inverter/ compressor" on page 26.

The flashing frequency shows the number of times the LED blinks after every 2.5-second OFF.
(Example) When the flashing frequency is “2”.



2. Trouble criterion of main parts

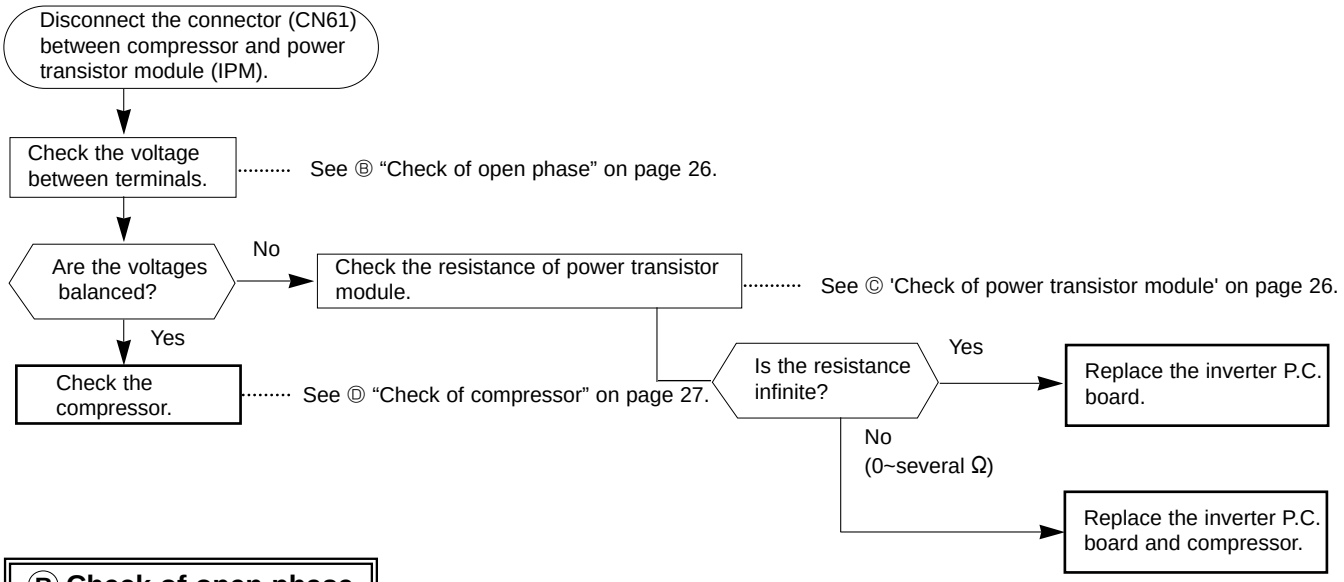
When OPERATION INDICATOR lamp flashes 5-time.
Outdoor unit does not operate.

Ⓐ How to check inverter/ compressor



Ⓑ Check of open phase

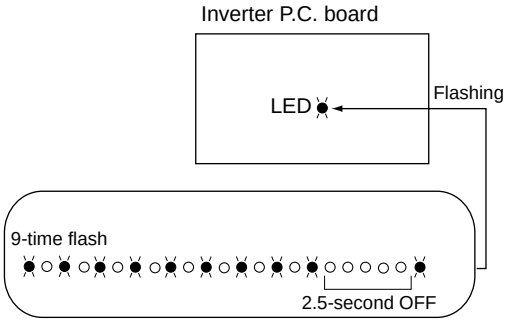
●With the connector between compressor and power transistor module disconnected, activate the inverter and check if the inverter is normal by measuring the balance of voltage between terminals.

Output voltage [V]
115V

<< Operation method>>
Start cooling or heating operation by pressing the EMERGENCY OPERATION switch on the indoor unit. (test-run mode : refer to page 14)
<<Measurement point>>
at 3 points
BLK (U)-WHT (V)
BLK (U)-RED (W)
WHT(V)-RED (W)

※ Measure AC voltage between the lead wires at 3 points.

NOTE 1. Output voltage varies according to power supply voltage.
2. Measure the voltage by analog type tester.
3. During this check, LED of inverter P.C. board flashes 9 times.

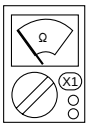


Ⓒ Check of power transistor module

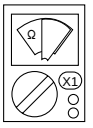
●Disconnect the connector (CN61) between compressor and power transistor module, and measure the resistance between terminals on the power transistor module.
<<Measurement point>>
at 6 points
BLK-WHT, WHT-BLK
BLK-RED, RED-BLK
WHT-RED, RED-WHT

<<Judgement>>
Infinite [Ω]·····Normal
0~dozens of ·····Abnormal (short)

ohmmeter indication

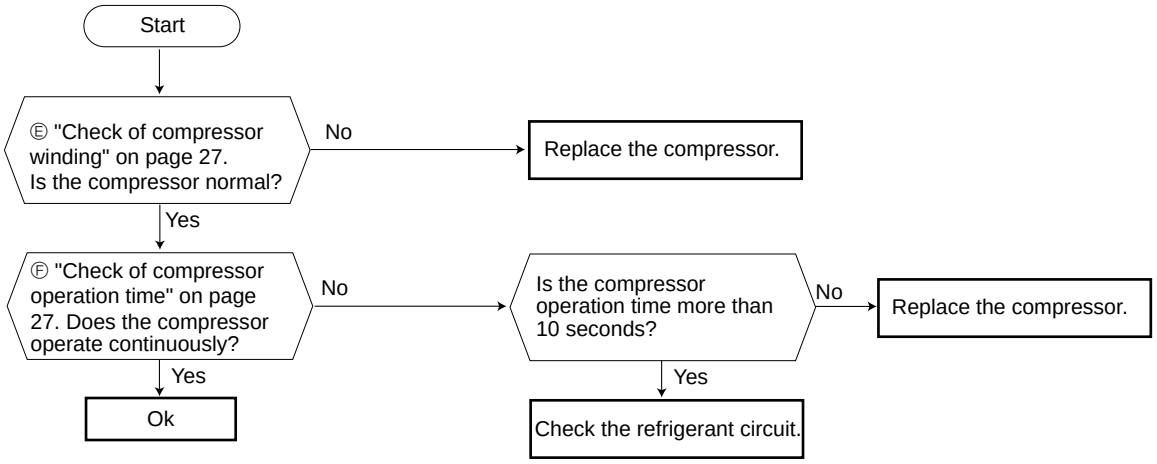


····· Normal (infinite)



····· Abnormal (0~dozens of Ω)

Ⓓ Check of compressor



Ⓔ Check of compressor winding

● Disconnect the connector (CN61) between compressor and power transistor module, and measure the resistance between the compressor terminals.

<<Measurement point>>

at 3 points

BLK-WHT

BLK-RED

WHT-RED

※ Measure the resistance between the lead wires at 3 points.

<<Judgement>>

Refer to page 25.

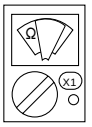
0[Ω] ……Abnormal [short]

Infinite[Ω] ……Abnormal [open]

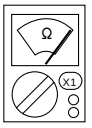
NOTE 1. Be sure to zero the ohmmeter before measurement.

2. Winding resistance for each phase at 20℃.
Refer to page 5.

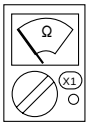
Ohmmeter indication



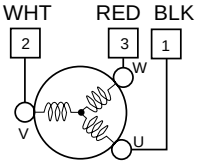
…… Normal
(1~several Ω)



…… Abnormal
(0Ω …… short)



…… Abnormal
(infinite…… open)



Compressor motor

Ⓕ Check of compressor operation time

●Connect the compressor and activate the inverter. Then measure the time until the inverter stops due to over current.

<<Operation method>>

Start heating or cooling operation by pressing the EMERGENCY OPERATION switch on the indoor unit. (Test-run mode)

<<Measurement>>

Measure the time from the start of outdoor fan running to the stop of compressor due to over current.

<<Judgement>>

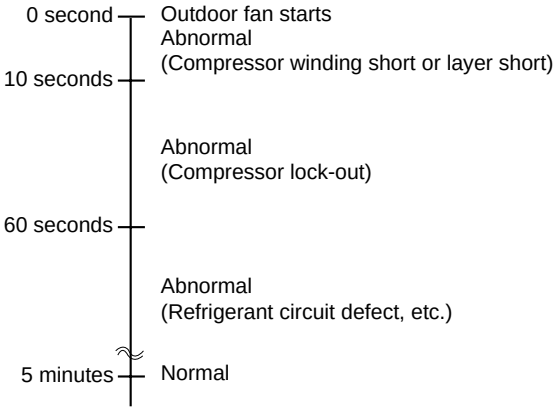
For reference

0~10 seconds……Abnormal (compressor short)

10~60 seconds……Abnormal (compressor lock-out)

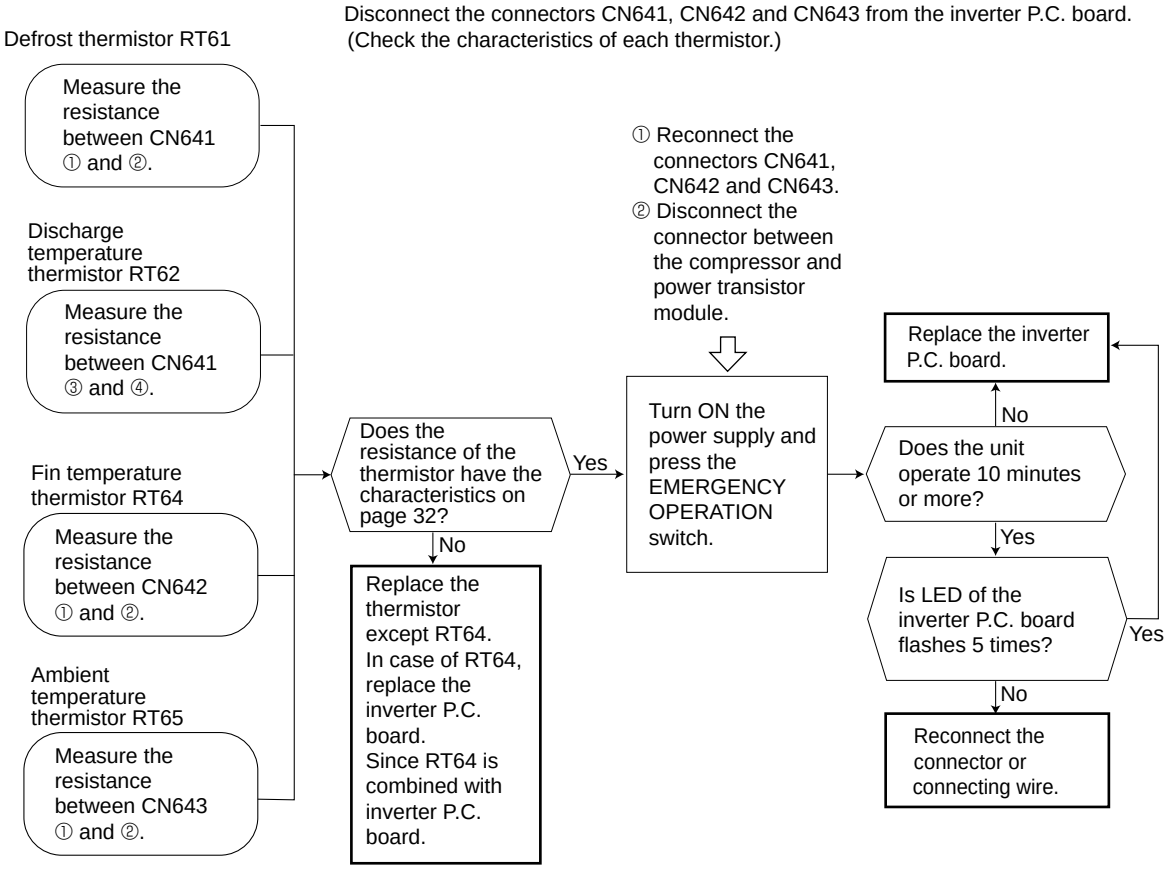
60 seconds~5 minutes……Abnormal (refrigerant circuit defect)

more than 5 minutes……Normal



When OPERATION INDICATOR lamp flashes 6-time.
The thermistors in the outdoor unit are abnormal.

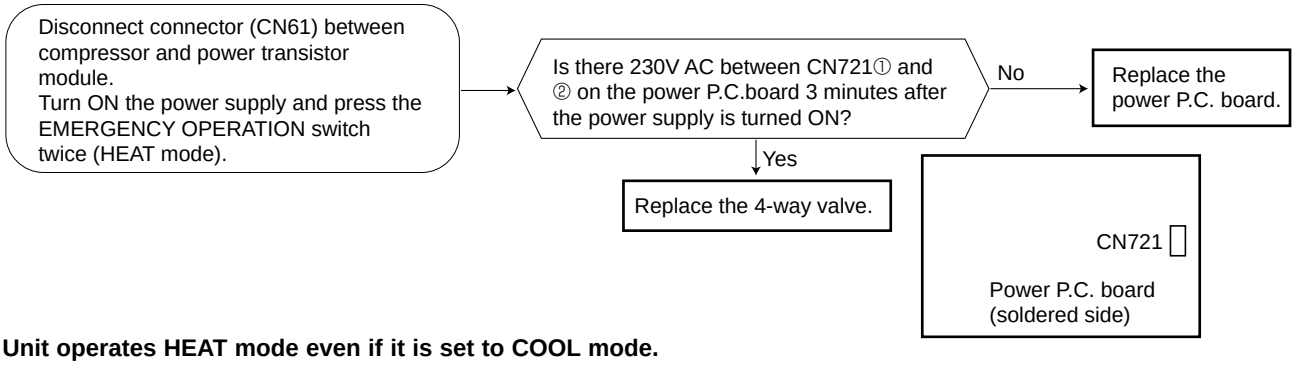
Ⓖ Check of outdoor thermistors



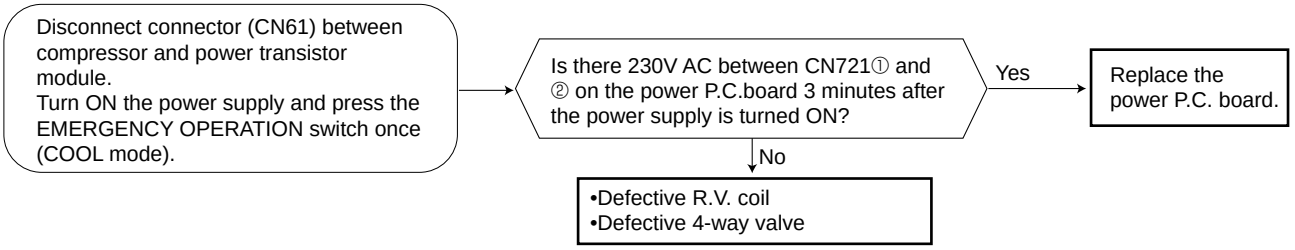
Ⓗ Check of R.V. coil

※ First of all, measure the resistance of R.V. coil to check if the coil is defective (refer to page 25).
※ In case CN721 is not connected or R.V. coil is open, voltage is generated between the terminal pins of the connector although any signal is not being transmitted to R.V. coil. Check if CN721 is connected.

Unit operates COOL mode even if it is set to HEAT mode.

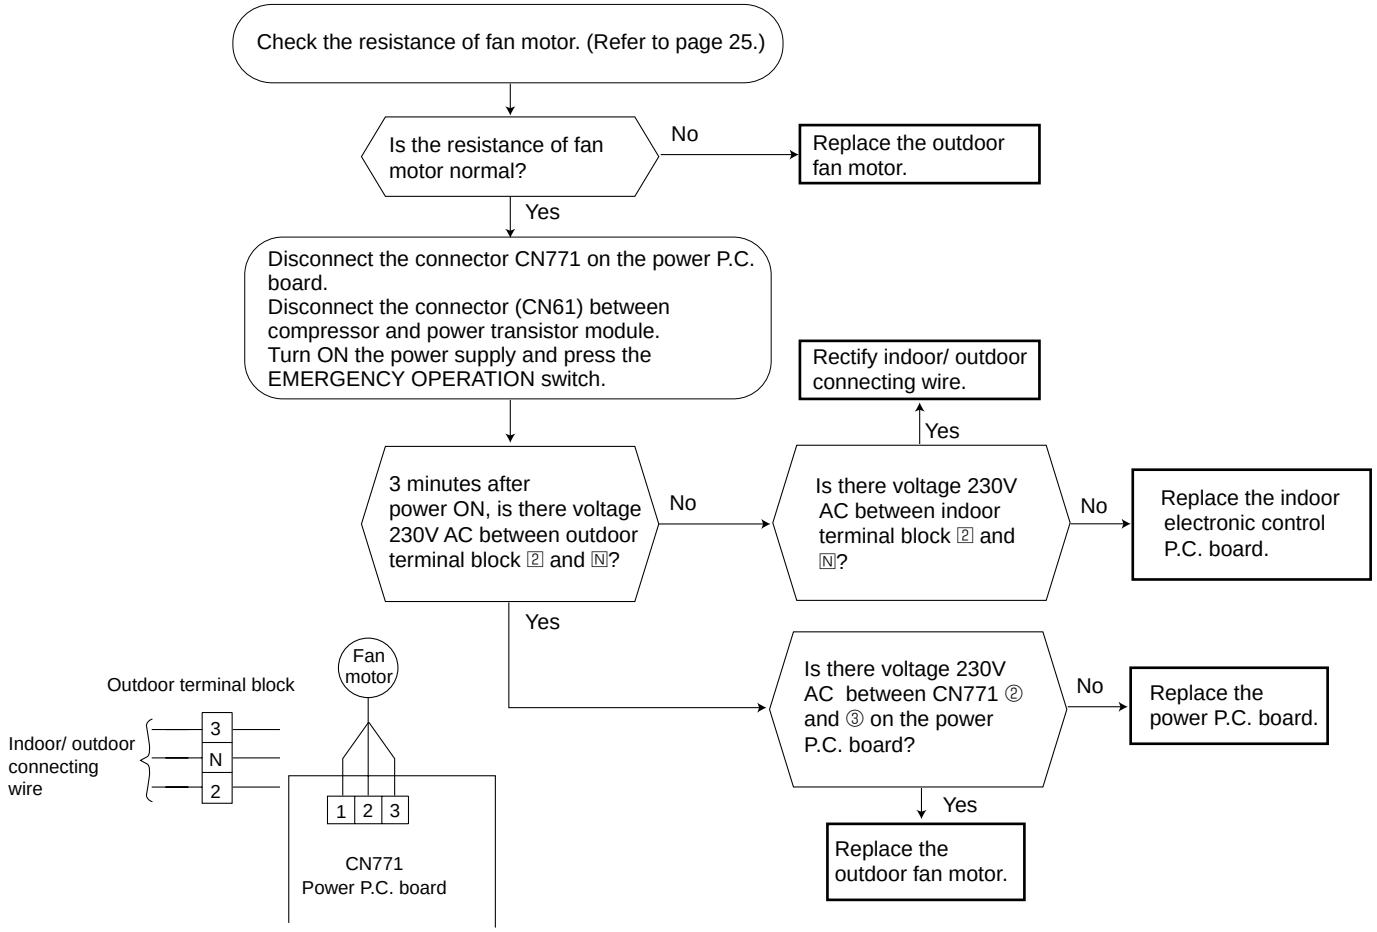


Unit operates HEAT mode even if it is set to COOL mode.



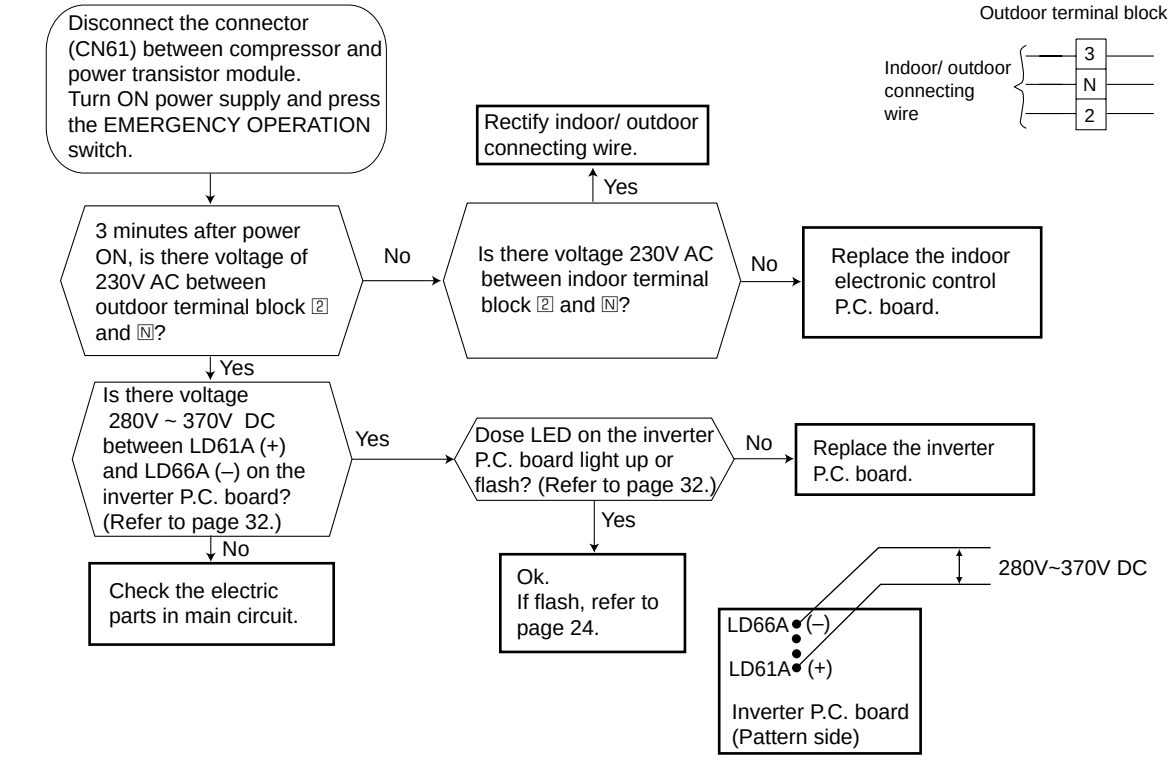
Outdoor fan motor does not operate.

Ⓘ Check of outdoor fan motor



Inverter does not operate.

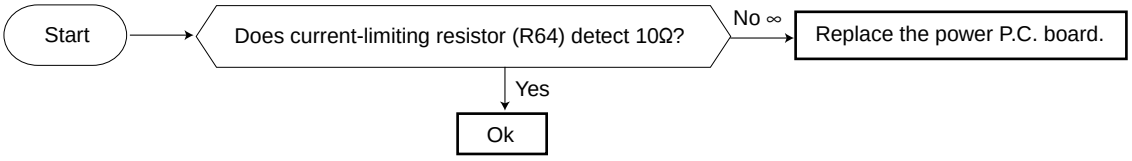
Ⓙ Check of power supply



Outdoor unit does not operate at all or stops immediately due to over current.

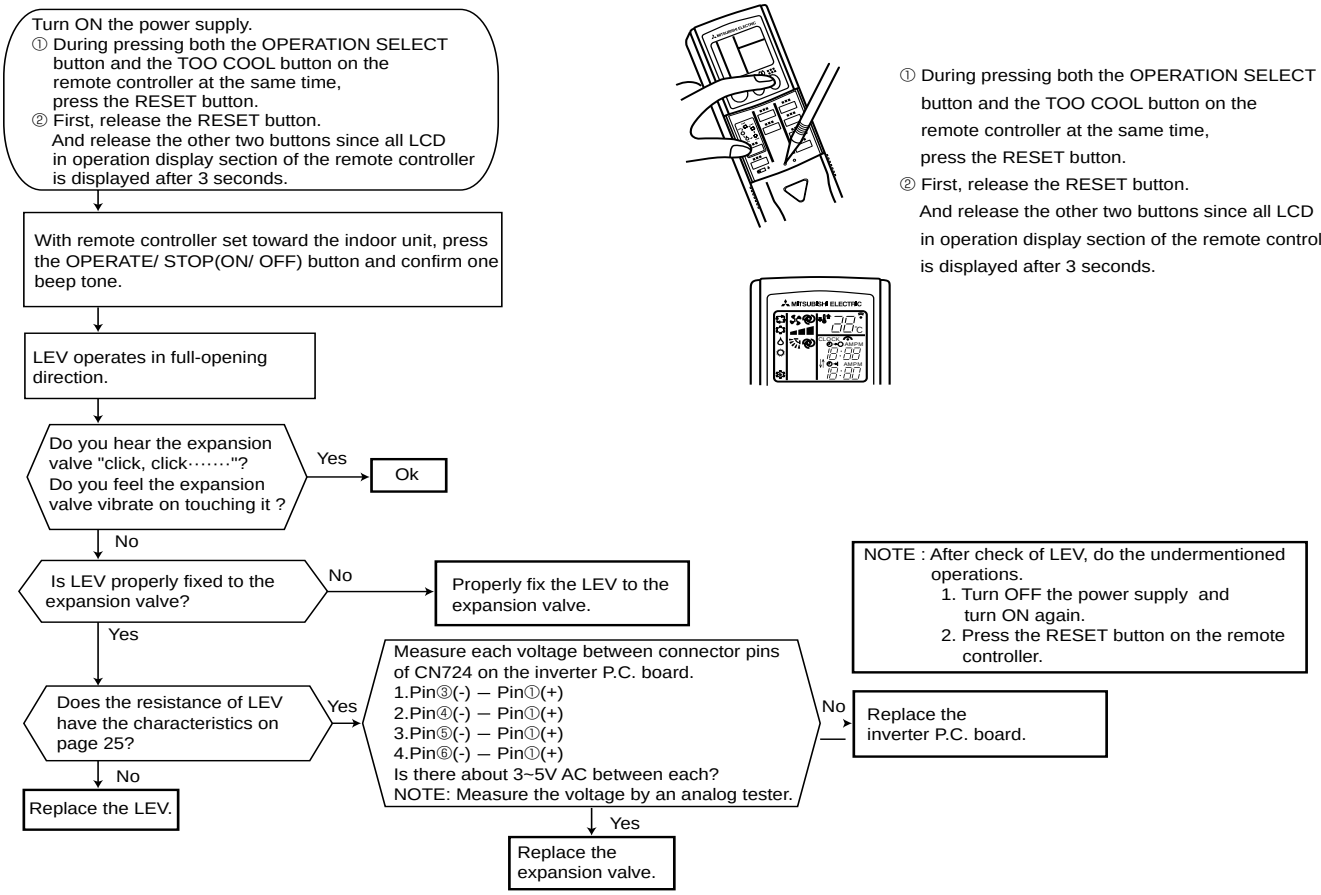
Ⓚ Check of current-limiting resistor

When the current-limiting resistor is open, the rush current limiting relay (X64) may not work properly.



Heating/Cooling does not work sufficiently.

Ⓛ Check of LEV (Expansion valve)

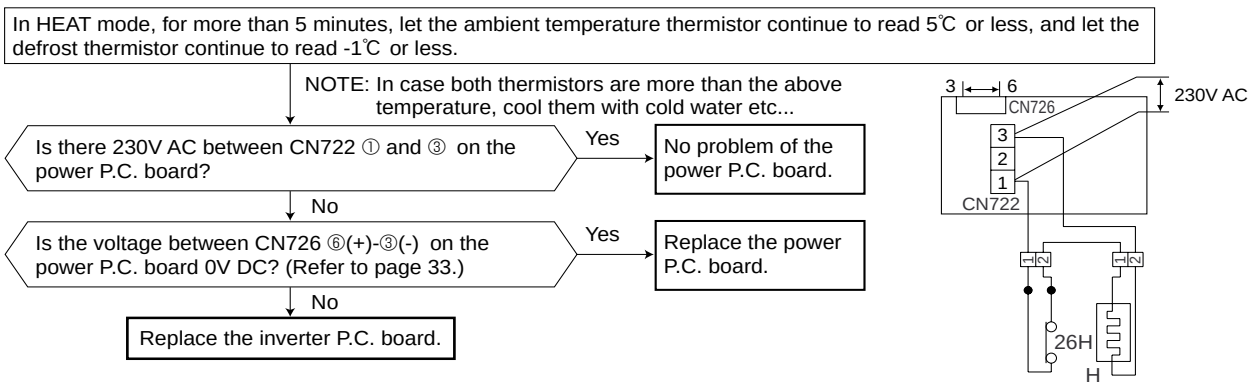


Outdoor base gets frozen.

Ⓜ Check of defrost heater

<MUZ-A09YVH MUZ-A12YVH>

Check the following points before checking electric continuity.
1) Does the resistance of ambient temperature thermistor have the characteristics? (Refer to page 32.)
2) Is the resistance of defrost heater normal? (Refer to page 25.)
3) Does the heater protector remain conducted (not open)?
4) Are both ambient temperature thermistor and circuit of defrost heater securely connected to connectors?



When OPERATION INDICATOR lamp flashes ON and OFF in every 0.5-second.
Outdoor unit doesn't operate.

Ⓝ How to check mis-wiring and serial signal error (when outdoor unit does not work)

Start

• Turn ON the power supply.
• Press once EMERGENCY OPERATION switch.

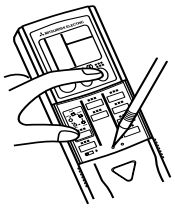
After 3 minutes, mis-wiring is indicated (0.5-second ON, 0.5-second OFF) on OPERATION INDICATOR lamp on indoor unit.※

Is there any mis-wiring, poor contact, or wire disconnection? ※2

Yes → Make them sure.

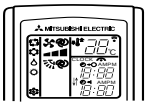
No

A



B

Turn OFF the power supply.
Disconnect the indoor/ outdoor connecting wire.
Short-circuit indoor terminal block Ⓝ and 3.
Turn ON the power supply.
During pressing both the OPERATION SELECT button and TOO COOL button on the remote controller at the same time, press the RESET button.
At first, release the RESET button.
And release the other two buttons since all LCD in operation display section of the remote controller is displayed after 3 seconds.
Transmit the signal of remote controller, pressing OPERATE/STOP (ON/OFF) button on the remote controller.
(The above procedure allows OPERATION INDICATOR lamp to indicate the failure-mode.)



•The following indication applies regardless of shape of the indicator.

Blinking

Operation Indicator

Does the right side of OPERATION INDICATOR lamp blink quickly?

No (light up or OFF) → Replace the indoor electronic control P.C. board.

Yes

Release the failure mode. ※3

Remove the short-circuit between indoor terminal block Ⓝ and 3.
Reconnect the indoor/ outdoor connecting wire.
Turn ON the power supply.
Press the EMERGENCY OPERATION switch.
Is there amplitude of 5 to 10V DC between outdoor terminal block Ⓝ and 3 after 3 minutes (for confirmation of serial signal)?

No → Replace the indoor/ outdoor connecting wire.

Yes

Is there 230V AC between outdoor terminal block 2 and Ⓝ?

No → Replace the indoor/ outdoor connecting wire.

Yes

1. Turn OFF the power supply.
2. Disconnect the connector (CN61) between the compressor and the power transistor module.
3. Turn ON the power supply.
4. Press the EMERGENCY OPERATION switch.

Is there voltage approximate 280V DC between LD61A (+) and LD66A (–) on the inverter P.C. board arter 3 minutes?

Yes → ※4 Replace the inverter P.C. board.

No

Turn OFF the power supply and then turn ON again.
Press EMERGENCY OPERATION switch.
After 3 minutes, is there approximate 230V AC between outdoor terminal block 2 and Ⓝ?

Yes

No

Replace the indoor/ outdoor connecting wire.

※4 Be careful to the residual voltage of smoothing capacitor.

As for indoor unit MSZ type, refer to service manual OB327.
As for indoor unit MCFZ type, refer to service manual OB344.

※ Short circuit of JPG and JPS on the indoor electronic control P.C. board enables self-check to be displayed in 3 seconds.

※2 Mis-wiring may damage indoor electronic control P.C. board during the operation. Be sure to confirm the wiring is correct before the operation starts.

※3 Be sure to release the failure-mode recall function after checking.
Procedure of release of failure-mode.
① Press the EMERGENCY OPERATION switch.
② Turn OFF the power supply.
③ Press the RESET button on the remote controller.

A
· Turn OFF inverter-controlled lighting equipment.
· Turn OFF the power supply and then turn ON again.
· Press the EMERGENCY OPERATION switch.

Is mis-wiring indicated when the contactor (52C) on the indoor electronic control P.C. board turns ON 3 minutes later?

No → · Reinstall either the unit or the light each other away.
· Attach a filter on receiving section of the indoor unit.

Yes

B

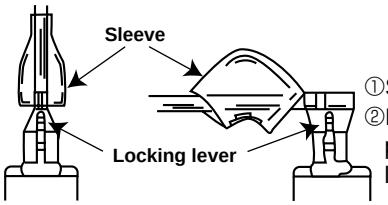
12 DISASSEMBLY INSTRUCTIONS

<"Terminal with lock mechanism" Detaching points>

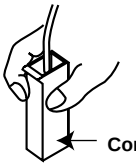
In case of terminal with lock mechanism, detach the terminal as shown below.
There are two types (Refer to (1) and (2)) of the terminal with lock mechanism.
The terminal with no lock mechanism can be removed by pulling it out.
Check the shape of the terminal and work.

(1) Slide the sleeve and check if there is a locking lever or not.



①Slide the sleeve.
②Pull the terminal while pushing the locking lever.

(2) The terminal with this connector is a terminal with lock mechanism



①Hold the sleeve, and pull out the terminal slowly.
